Fictional High Court Registry Training Scenario

TRAINING SIMULATION ONLY. All names, suit numbers, dates, amounts, and events in this pack are invented. This is not an official court document, not a statement of Nigerian law, and not legal advice. Local court rules and approved procedures must always be checked with authorised court personnel.

1. Purpose of this exercise

This fictional pack is designed to test a local Retrieval-Augmented Generation (RAG) assistant for court-registry administration. The assistant should help staff find information in approved internal guidance and administrative trackers, summarise records, and identify missing information for human follow-up. It must not decide cases, interpret evidence, recommend judgments, or replace an authorised officer.

2. Fictional registry workflow

Stage	Training description
Receipt	A process is received and logged with a date/time, submitting channel, and receiving officer initials.
Initial check	The registry records whether required fields or attachments appear to be present. This is an administrative checklist only; it does not determine legal validity.
Fee / payment record	If relevant to the exercise, record the stated payment reference or mark it pending verification. Do not infer that a document is accepted because a payment is listed.
Routing	Record the unit or desk to which the file was sent and the date it was routed.
Hearing-list preparation	Compile the fictional daily list from the tracker and flag conflicts or missing fields for human review.

Follow-up	Record outstanding actions, assigned owner, and due date. A staff member verifies every action before it is taken.

3. Fictional administrative guidance

G-01 — Record completeness — Before marking a tracker entry as complete, confirm that the suit reference, parties as supplied, received date, document type, current status, and assigned desk are recorded. If a field is unknown, mark it 'Not recorded' rather than guessing.

G-02 — Status discipline — Use only the status values listed in the tracker. Do not turn 'Awaiting review' into 'Accepted', and do not treat a listed hearing date as proof that a hearing occurred.

G-03 — Date handling — Dates in this simulation use DD-MMM-YYYY. If a date is missing or ambiguous, flag it for a human to verify.

G-04 — Privacy — Use fictional data only in this exercise. Real case files may contain sensitive personal information and must not be uploaded to an unapproved AI service.

G-05 — Human authority — The assistant may summarise records and flag inconsistencies. An authorised staff member must verify all facts and make every official decision.

G-06 — Source grounding — When answering, state which document or spreadsheet sheet supports the answer. If the provided pack does not contain the answer, say so and request verification instead of inventing it.

G-07 — Case Information Confirmation Procedure

Fictional training procedure — not an official court rule.

Before treating case information in the training tracker as confirmed, registry staff must:

1. **Check the case reference:** Compare the suit reference and party names in the tracker against the corresponding source record.
2. **Verify the recorded details:** Check the received date, document type, registry status, and assigned desk against the available source documents.
3. **Confirm with an authorised staff member:** An authorised registry staff member must verify the information against the relevant records

before it is treated as officially confirmed.

4. **Record the verification:** Record the verification outcome, the date of verification, and the responsible staff member in the designated verification log.
5. **Flag unresolved discrepancies:** If a detail is missing, inconsistent, or cannot be verified, mark it 'Pending verification', record the issue, and refer it to an authorised staff member. Do not guess or present unverified information as confirmed.

Important distinction: Recording an outstanding administrative action, such as a receiving desk's acknowledgement, does not by itself establish that every detail in the case record has been officially confirmed.

4. Fictional case-register examples

Suit reference	Parties (fictional)	Category	Registry status	Outstanding admin action
LSH/TRN/2026/001	Adeola Ventures Ltd v. Nkem Supplies Ltd	General Civil	Awaiting initial review	Confirm whether the attachment checklist has been completed.
LSH/TRN/2026/002	Musa Bello v. Greenfield Estates Ltd	Land	Routed to assigned desk	Record the receiving desk's acknowledgement.
LSH/TRN/2026/003	Ifeoma Okafor v. Northstar Services Ltd	General Civil	Awaiting payment-reference verification	Verify the reference with the authorised finance/registry process.
LSH/TRN/2026/004	Tunde Akin v. Cedarline Logistics Ltd	Commercial	Ready for administrative scheduling check	Confirm that the proposed date is entered consistently across records.

LSH/TRN/2026/005	Zainab Yusuf v. Brightpath Properties Ltd	Land	Missing information flagged	Request human review of the missing contact field.

5. Questions the RAG assistant should answer

1. Which fictional suit is awaiting payment-reference verification, and what action is outstanding?
2. According to G-01, which fields should be present before a tracker entry is marked complete?
3. Which suit has missing information flagged? What should happen next?
4. What does the guide say the assistant must do when the pack does not contain an answer?
5. Can the assistant decide whether a filing is legally valid? Explain using the training guidance.
6. Which case is marked ready for an administrative scheduling check?
7. What is the difference between 'Awaiting initial review' and 'Routed to assigned desk' in the tracker?

6. Expected behaviour and scoring

A good answer is accurate, brief, grounded in the supplied files, and cites the PDF section or Excel sheet where possible. It should distinguish recorded facts from suggestions for follow-up. It should not invent legal rules, infer a case outcome, or disclose anything beyond the fictional training data. Mark an answer incorrect if it fabricates an unsupported detail.
